## TECHNICAL REQUIREMENTS

Depending on the available space and budget, Tidals Echoes can be displayed either on an LED screen (minimum 3m long) or on a projection screen (minimum 3m long) with one HD projector (minimum 8K lumens).

If the available space is greater than 8m long, it is preferable to add a second projector. As a generative artwork, it is possible to adapt the piece in terms of its aspect ratio and resolution to match the chosen display.

Tidals Echoes can be delivered in two different versions.

- Version 1: 15-minutes Video File with Stereo Sound. Delivery on a Hard Drive or via a download platform (Google Drive, secure FTP server).
- Version 2: Generative Program with Stereo Sound. Setup and teardown by the artist of the computer running the program (artist fee to be covered).

The choice of version depends on the hosting festival's preferences and the budget they can allocate for the event.
