

TECHNICAL SHEET

The work is staged on a performance space, ideally a theater stage but adaptable to other spaces. It requires several technical elements:

- A cinema-type projection screen + HDMI-connected video projector
- A Wi-Fi router to enable communication between the tablet and the computer
- A wireless microphone for the narrator
- Microphones for the musician's instruments
- A sound system and monitors around the stage
- Stage lighting for each role as well as side lighting on the edges of the stage

The audience is situated on stage, around the performance area, and can freely move on and off the stage throughout the day.

The minimum required space is 8x6 meters, and the entire setup can be assembled in half a day with the help of a stage technician.
