Mediation through creativity

Who are we?

BabelGallery is a hub for digital research and creation, dedicated to cultural institutions, artists, and individuals.

We design image-generation models that replicate the styles of renowned painters.

Our models

With BabelGallery, users can create images **'in the style of'** using a sentence, an image, or a drawing.

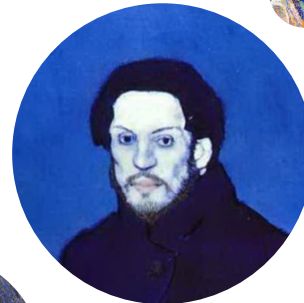

The image generated is placed in a fictitious historical context: this cartel is a fun and effective way of understanding an artist's style.

Picasso.AI

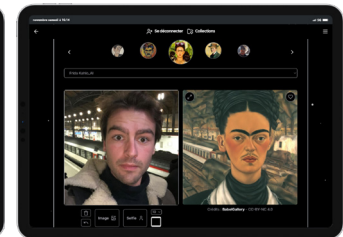

Our objectives

- To design innovative cultural mediation tools in collaboration with museums.
- To support art historians in data analysis.
- To provide everyone with new means of creation and expression.

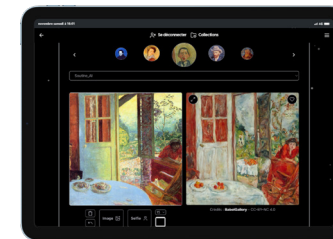

Digital interfaces

All generated with a museum cartel

Museum displays

Innovative tools adapted to the needs of each museum:

- Models trained on collections or designed for temporary exhibitions.
- A digital easel designed for mediation, to be installed along the visitor path.
- Interactive supports for educational workshops.
- In the gift shop: a professional print to take home your artwork in postcard format..

Aesthetic Revolution

Artificial intelligences are transforming contemporary creation and our understanding of past works.

Once retrained, image-generation models become effective tools for imitating, varying, and translating famous styles.

These technologies renew the visitor's interaction with the exhibited works.

We support museums in this transformation by developing mediation systems that make the most of artificial intelligence.
